VOYAGE CARE

SPEC SHEET

SECTOR:

Care Homes

OUR CLIENT:

Voyage Care

OTL PRODUCTS SPECIFIED:

Bespoke Level Access Wet Room Floor
Formers

PROJECT OVERVIEW

On The Level first started supplying Voyage Care after an issue arose around problems with draining water away quickly enough in their current set-up, leading to water draining away from the shower area into the rest of the bathroom.

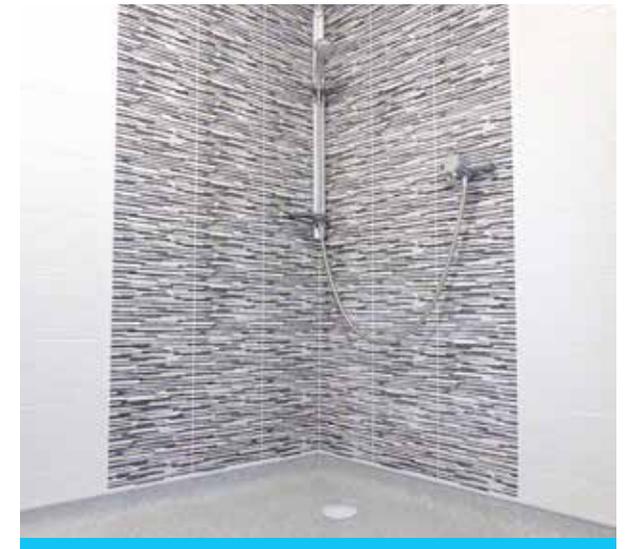

Because On The Level are able to manufacture shower formers which exceed normal stock size formers, we create a floor gradient over the complete floor area. There is therefore a gradient across the whole floor area, from the door into the shower room, meaning all water runs towards the gully outlet (which were also positioned in-between joists for ease of installation). Our concealed wet floor formers for Voyage Care are covered with a non-slip vinyl sheet floor.

From the first sketched outline of what is needed to the final finished product, we work hand in hand with our clients all the way to make sure that the end product is exactly what they need.

“Whereas before, we would have to work around competitors’ standard, off-the-shelf products, now with OTL they are really flexible – great at anything out of the ordinary or bespoke and in helping us to sort out any tricky issues with good, solid solutions that work cost-efficiently. Their product quality is excellent and their bespoke service doesn’t come at the cost of a good price – their prices are always solidly competitive.”

Phil Chawner, Voyage Care
